

Mainline STRAIGHT-FIT™ Extendable Backwater Valves

The STRAIGHT-FIT™ is Mainline's latest addition to our Extendable Backwater Valve series. The STRAIGHT-FIT™ valves come in 4" and 6" and has features that will make them one of the most asked for valves in the industry!

Made of PVC and ABS, the STRAIGHT-FIT™ has a body that is extendible to whatever depth you require by simply gluing a riser pipe into the valve body and extending to ground level. The gate is glued to a 3/4" PVC pipe to form a key and cut to the required length to extract the gate from the valve body. We have also integrated our new 'Smart-CURVE™' technology which serves as a dual function. Firstly, this system features a 'curved gate' that is designed to allow a sewer snake to feed and retract without catching on the gate itself! The other added benefit is a 'Smart-CURVE™' 'cleat insert' in the body that will ease and guide the retrieval of the snake without hanging up on the body. The STRAIGHT-FIT™ also comes with an optional Test Gate that can be used to pressure test the system or to isolate the property for whatever purpose; non-payment of services, vacation properties, servicing etc.
